UtilityScan® Pro

The UtilityScan® Pro is GSSI’s premium utility locating system, offering users modularity within one scanning system. The UtilityScan Pro system provides a non-destructive means to accurately locate metallic and non-metallic underground utilities.

The Pro Advantage

UtilityScan Pro is ideal for locating the position and depth of metallic and non-metallic objects, including service utilities such as gas, communications, sewer lines as well as underground storage tanks and PVC pipe. It is also used to help identify shallow geophysical characteristics and to conduct site assessments. The UtilityScan Pro is based on the SIR 4000, and can be used for additional applications, including bridge and concrete inspection, by interchanging the cart and antenna configurations.

UTILITYSCAN PRO FEATURES

Mark with Confidence
The UtilityScan Pro delivers exceptional data quality and is rugged enough to withstand the job site’s toughest conditions. Locate subsurface utilities, with confidence.

Fully Customizable System
Users can customize the UtilityScan Pro with multiple antenna offerings and cart options. The tailored options provide survey flexibility, from smooth, prepared surfaces to rugged terrain with our rugged four-wheel cart that suit a number of utility locating applications.

Data Visualization
The UtilityScan Pro system features our state-of-the-art SIR 4000 controller and can incorporate an optional AC power accessory. The SIR 4000 controller incorporates advanced display modes and filtering capabilities for in-the-field processing and imaging. The LineTrac accessory for digital antennas adds the ability to detect AC power and induced RF energy present in buried utilities.

UTILITYSCAN PRO FLEXIBILITY

Concrete Scanning and Inspection
Use ground penetrating radar to locate embedment within concrete structures prior to cutting or coring. Collect quantifiable data on rebar location and areas of delamination.

Bridge Inspection
Determine the condition of bridge decks, parking structures, or balconies with the addition of a larger cart and software options.

TYPICAL USES
Underground Utility Detection
Environmental Remediation
Damage Prevention
Geological Investigation
Archaeology
Forensics
Road Inspection

FCC, RSS-220 and CE Certified
